Figure 1 is a schematic representation of the experimental design. It shows a flowchart with two main paths: 'Pretest' and 'Main Experiment'. The 'Pretest' path starts with a box labeled 'Pretest', which leads to a decision box 'Pretest Results'. From 'Pretest Results', a 'No' branch leads to the 'Main Experiment' path, and a 'Yes' branch leads to the 'Main Experiment' path. The 'Main Experiment' path starts with a box labeled 'Main Experiment', which leads to a decision box 'Main Experiment Results'. From 'Main Experiment Results', a 'No' branch leads back to the 'Pretest' path, and a 'Yes' branch leads to the 'Main Experiment' path.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The number of transformed explants was counted after 4 weeks of culture. The data are the mean \pm SD of three independent experiments.
